Project Title: Digital Literacy Portfolio: Student Digital Ambassador Project

Course Code: CSE0001

Course Title: Digital Literacy

Student Name: SUJAL SAHA

Registration Number: 25BAI10351

Branch: B.Tech CSE (AI/ML)

Year: First Year B.Tech

Date of Submission: 31/03/2026

Introduction

As a newly appointed Student Digital Ambassador, I have developed this Digital Literacy Portfolio to serve as a comprehensive guide for my peers. The digital world requires more than just basic internet access; it demands a professional presence, safe communication habits, and a strong understanding of online security. This project documents my journey through five specific modules designed to build these foundational skills. From creating visual infographics and professional profiles on LinkedIn and GitHub to mastering email etiquette and researching cybercrime prevention, this report summarizes the practical tasks I have completed. The goal of this assignment is to demonstrate my ability to navigate digital platforms effectively while providing a resource that my batchmates can use to enhance their own digital literacy.

Task 1 Write-up: Digital Literacy Awareness Infographic

For the first task, I created a one-page visual infographic using **Canva**. The design focuses on three critical pillars of digital literacy: defining what it is, highlighting safe internet practices, and outlining professional email etiquette. I chose a clean, modern layout with distinct sections to ensure the information is easily digestible for students in my batch.

The design process was engaging as it required me to condense complex information into concise bullet points and icons. I found it particularly interesting to see how visual hierarchy can change the way a reader perceives the importance of different tips. One minor difficulty I encountered was balancing the amount of text with the visual elements to prevent the page from looking cluttered. Ultimately, this infographic serves as a quick-reference guide for anyone looking to improve their digital footprint and stay safe while collaborating online.

Task 2 Write-up: Student Digital Portfolio

In this module, I established my professional digital presence by setting up accounts on **GitHub**, **LinkedIn**, and **Kaggle**. LinkedIn is utilized as my primary professional networking tool

where I have detailed my current education at VIT Bhopal. On GitHub, I initialized my profile README to introduce myself to the developer community, listing my branch and my goal to master full-stack development. Kaggle was chosen as a platform to explore data science and participate in future coding competitions.

Setting up these platforms is a strategic move for my career. Over the next four years, I plan to use LinkedIn to connect with alumni and industry experts, while GitHub will serve as a living repository for all my academic and personal coding projects. By maintaining these profiles early on, I am building a credible and transparent record of my growth as an engineer, which will be essential when applying for internships and future job opportunities.

Task 3 Write-up: Coding & Collaboration Platforms

This task focused on technical proficiency and collaborative tools. For the coding portion, I used **HackerRank** to complete the "Solve Me First" challenge. This exercise helped me familiarize myself with the platform's environment, which is commonly used for technical interviews. For the collaboration portion, I designed a **Google Form** titled "Digital Literacy Awareness Quiz". The form includes five questions, including multiple-choice and short-answer formats, to test my peers' knowledge of online safety.

Practicing with these tools has significant academic benefits. HackerRank provides a structured way to improve my problem-solving skills and learn new programming languages. Meanwhile, mastering Google Workspace tools like Forms and Sheets is vital for organizing group projects and analyzing data efficiently. These platforms collectively bridge the gap between individual technical skill and the ability to work effectively within a digital team.

Task 4 Write-up: Professional Communication & Etiquette

Communicating professionally is a vital skill for a Digital Ambassador. For this task, I drafted two distinct emails: one requesting an assignment extension from a professor and another expressing interest in a summer internship. Both drafts followed strict etiquette rules, including clear subject lines, formal salutations, and structured bodies. I also developed a "Social Media Do's and Don'ts" checklist to guide students in maintaining a responsible online persona.

A key learning from this module is that digital communication can easily be misinterpreted. I researched a scenario where a poorly phrased email led to a missed opportunity because the tone was perceived as disrespectful. This taught me that being concise and respectful is far more effective than writing long, unstructured messages. Proper digital etiquette ensures that my professional requests are taken seriously by faculty and recruiters alike.

Task 5 Write-up: Cybercrime Awareness & Prevention

In my research for this task, I focused on a case study regarding **Phishing**. I documented how attackers use deceptive emails to steal login credentials and the financial consequences that follow. What surprised me most was the sophistication of modern "spear-phishing" attacks,

which are tailored specifically to trick individuals by using familiar names or institutional branding.

As a result of this research, I will personally change my habit of clicking links in emails without first verifying the sender's actual address. I have also compiled a safety checklist for my peers, highlighting the importance of using the National Cyber Crime Portal (cybercrime.gov.in) and the 1930 helpline for reporting fraud. This module reinforced that being digitally literate means being constantly vigilant and protective of my personal and financial data in an increasingly connected world.

Conclusion

The Digital Literacy project has been a transformative experience in understanding my responsibilities as a Student Digital Ambassador. I have learned that digital literacy is a multi-faceted discipline encompassing technical skill, professional branding, and security awareness. By building this portfolio, I have not only created a repository of my work but also established a professional foundation that will support my academic and career goals over the next four years. I am now better equipped to help my peers navigate the digital landscape safely and professionally.
